ABOUT ME

Juan Antonio is a dedicated software engineer with a strong focus on backend development. His work is characterized by a solid understanding of software architecture principles, algorithms, and data structures.

Committed to continuous improvement, he actively seeks to deepen his expertise in these areas. His professional experience has not only honed his technical skills but also fostered collaboration within diverse teams, enhancing his communication abilities and instilling a strong cooperative work ethic.

Juan Antonio's analytical mindset and problem-solving skills make him a valuable asset in any software engineering environment.

STACK TECH

- Kotlin (Micronaut)
- Java (Spring Boot)
- Python (FastAPI)
- Node.js
- RDB (PostgreSQL, MySQL, OracleSQL)

Education

- 2016-2022 B.Sc. Computer Science
University of Murcia
- 2022-2024 M.Sc. New Technologies in Computer Sciences
University of Murcia

Experience

- 2021-2021 Full-stack developer Intern
Metaenlace
- 2021-2022 Full-stack developer Software Engineer
Metaenlace
- 2022-2023 CyberDataLab member Researcher
University of Murcia
- 2022-2023 Valkyries H2020 Researcher
University of Murcia
- 2024 Backend Engineer Software Engineer
Orbyn

Languages

- Spanish: Native
- English: B2

Projects

Intern Developer at Metaenlace

Distributed Application for Medical Appointments: Developed a robust distributed application to streamline medical appointment scheduling. Utilized Angular for the frontend, .NET 5 for backend logic, and Oracle SQL for database management, enhancing user experience and operational efficiency.

Full-Stack Developer at Metaenlace

Full-Stack Applications for Servicio Murciano de Salud: Led the development of full-stack applications leveraging Java Server Faces and Primefaces for the frontend, alongside Spring Framework for backend services and Oracle SQL.

CyberDataLab Member at University of Murcia

Desktop Application for Brain-Computer Interfaces Study: Developed an interactive desktop application to support research on non-invasive Brain-Computer Interfaces using Electron.js, React.js, FastAPI, and MySQL database, facilitating data analysis and visualization.

Web Application for Malware Detection in IoT Devices: Engineered a web application for the detection and classification of malware in IoT devices. Utilized React.js for a responsive user interface and FastAPI for efficient backend processing, ensuring robust data management with MySQL.

Backend Engineer at Orbyn

Microservices Development for Core Banking Platform: Spearheaded the development of microservices for a cutting-edge core banking platform using Micronaut and PostgreSQL, ensuring scalable and maintainable service architecture to meet complex financial requirements.

Publications

NeuronLab: BCI framework for the study of biosignals. <https://doi.org/10.1016/j.neucom.2024.128027>
